

Technical Service

24/7/365 Coverage

www.cpec.com

When it comes to keeping your coil feed lines up and running at maximum productivity, a little attention to preventative maintenance can go a long way. COE Press Equipment's service department performs mechanical and electrical inspections of your equipment that can help you increase your machine uptime and overall operating efficiency.

After visiting your facility, COE Service Technicians provide a detailed Service Report outlining all the recommendations for your lines. COE's Service Manager will then contact you to discuss the recommended action plan including a formal parts list and quotation. A timely follow-up service call is then arranged to implement the changes.

COE stocks and maintains a wide range of standard replacement and repair parts, with over half its orders shipped within 24-hours. For special parts, COE's vertically integrated manufacturing capability lets them manufacture on-site to produce the required parts efficiently and cost-effectively.

Call the COE Service Team today and let them help you get the most from your equipment. With 24/7 technical phone support, there is always someone ready to take your call.

Service Inspection Offerings

- Servo Feed Interfaces
- Servo Drive Amplifiers
- Servo Motion Controls
- Parameter Settings and Tuning
- Servo Feed Piloting Mechanisms
- Variable Speed Drive Systems
- Feeder and Straightener Rolls
- Feeder and Straightener Gears
- Coil Reel Inspection
- Brake System Condition
- Chain and Sprocket Condition
- Loop Control Set-up
- Material Threading System
- Lubrication System Check
- Overall Line Set-up
- Operator Training

COE Warehouse

Wide range of standard replacement parts are in stock with the majority shipped within 24 hours.

ServoMaster Controller

Upgrades with COE's Plug-n-Run™ Controls can be implemented quickly enabling higher performance and material capacity, and improved reliability.

Field Service

Technicians are available for equipment installation, troubleshooting, preventative maintenance, equipment repairs, rebuilds, and upgrades.

Machining

In-house machining capability enables efficient and cost-effective delivery of special parts.

The Company that Feeds an Industry

COE Press Equipment designs and manufactures a complete line of premiere coil handling and servo roll feed equipment from stand-alone roll feeds, straighteners, reels, cradles and air feeds to complete integrated feed line systems. The company supplies and services a wide variety of global markets and industries including automotive, appliance, lighting, metal processing, housewares, lawn and garden, contract stampers, tool and die builders, and many others.

COE provides one-stop shop capability starting with its top-notch engineering staff focused on R&D right through to fabrication, CNC machining, assembly, paint and electrical. This vertically integrated approach has led the company into developing its own line of servo feed controls, as well as customized packages and complete automated feed lines of the highest quality.

Founded in 1976, COE has a tradition of focusing on customer service first, ensuring the development and delivery of coil feeding equipment and systems in a timely manner, and best-suited to each company's particular need. For a complete list of satisfied customers or more information on our various product offerings, just visit www.cpec.com or contact your nearest COE representative, serving the United States, Canada and Mexico.
