

Mini SERVOMasterTouch™

COE
PRESS EQUIPMENT

The COE Press Equipment Mini SERVOMasterTouch™ servo feed HMI is a direct replacement for COE servo drive packages that were originally equipped with the following controllers:

- CPEC Thumbwheels
- COE BG1
- COE BG2
- COE ServoMaster
- COE ServoMaster3

The COE Mini SERVOMasterTouch is the next-generation touchscreen HMI, which provides an economical replacement option for obsolete controllers. This HMI upgrade is offered at a significant cost savings compared to a complete servo controls retrofit. It offers many of the same features as the COE SERVOMaster 6 controller, including a similar user-friendly graphical interface, error diagnostics, and plug-and-play operation with your existing Acroloop or Yaskawa motion controller. The Mini SERVOMasterTouch also includes the COE Work Roll Calculator to estimate straightener work roll settings for a variety of materials and systems, as well as the COE Performance Advisor to maximize job setup on your servo feeder.

Contact your COE service representative today for a Mini SERVOMasterTouch controller retrofit!
